Let $T:V\to V$ be a linear transformation such that for all $v\in V$, $\dim T(v) \leq \dim v$. How to prove that $\dim V\leq n$? A: Consider the composition of T with the projection map $P:V\to V/T(V)$. We have $TP(v)=0$ and P is onto. Since P is onto, then $\dim(V/T(V))=\dim V$. Now T is not injective: let $v\in V$ be non-zero. Then $\dim T(v)>\dim v$, contradicting your hypothesis. Thus $T=0$. @startuml sprite $color-input [48x48/16] { 000000000000000000000000000000000000000000000000 000000000000000000000000000000000000000000000000 000000000000000000000000000000000000000000000000 000000000000000000000000000000000000000000000000 000000000000000000011111111111111111111111110000 000000000000110101010101010101010101010101010 000000000001000111101011110111111111101111101 0 000000000010010010101010101010101010101010 000000000010010010101010101010101010101010 000000000010010010101010101010101010101010
