AutoCAD Crack+ Serial Key

The vista-autocad.dll, which is part of AutoCAD v2011, can be used to import DWG files into AutoCAD. Since version 2008, AutoCAD contains APIs for communicating with Apple iOS devices. It can both import and export drawing information to the iOS version of AutoCAD. Since AutoCAD 2016, it can also import and export to Microsoft Windows and Android. AutoCAD also has several web-based drawing software. As of version 2012, AutoCAD contains a scripting language, AutoLISP, which can be accessed using the AutoLISP Editor. Visual LISP is a programming language developed by NavisWorks, which is the same as LISP. One of the features of Visual LISP is that it is interpreted. This means that the lines of code are not compiled into a program file, rather the code is "interpreted" and executes as a script. Visual LISP has been the only scripting language used in AutoCAD until version 2014, where it was replaced by the Visual Basic for Application (VBA). AutoCAD script language AutoCAD script language, also called autoLISP, is an interpreter of the language developed by NavisWorks. It is a dialect of the LISP programming language and is completely different from the Visual LISP that is a compiled interpreted language. The AutoLISP Editor is a dialog which includes many features for managing AutoLISP scripts. The scripting language is capable of being used to automate the drawing process, to perform many other functions, and to perform tasks in the same way that Visual Basic for Applications, Visual LISP, Visual Scripting and other programming languages do. One of the key differences is that AutoLISP is a text-based programming language and not a graphical programming language. Because of this, it is more suited to AutoCAD's users who are not professional programmers. AutoLISP scripts can be included in the ActiveX Object of AutoCAD which is much like VBA. AutoLISP is used in the more advanced versions of AutoCAD and is also very useful to all users of AutoCAD. Many users prefer the AutoLISP language to the Visual LISP language, because it is much easier to work with for those who are not professional programmers.
