Invention This invention relates generally to the fabrication of semiconductor devices. More particularly, the invention pertains to a method for forming, at normal processing temperatures, conductive vias and trenches in insulating dielectric layers formed on semiconductor devices. 2. State of the Art Sub-half micron multi-level metallization is one of the key technologies for the next
generation of very large scale integration (VLSI). The multilevel interconnects that lie at the heart of this technology require planarization of interconnect features formed in high aspect ratio apertures, including contacts, vias, trenches and other features. Reliable formation of these interconnect features is very important to the success of VLSI and to the continued effort to increase
circuit density

Corel Paintshop Pro X8 Serial Number And Activation 15
