Noting the Ease of Use While most businesses are accustomed to modifying images through various applications, Photoshop is often the most common choice. The reason is that Photoshop is a great tool that helps you work quickly. It is easy to learn, and it provides everything you need to work with images effectively. Photoshop has a layered document style and a raster document style, whereas Elements uses a JPEG document style. You can choose the document type before you start any editing. The default document style will be what Photoshop creates for you. Photoshop's grouping features mean that you can apply an effect to an entire document and not have to select each individual image. For example, you can apply a gradation to the entire document. You can also apply a gradation to a particular layer that contains specific photos. Transparency: Creating Gradations and Color Corrections Because it's often used with photographs, Photoshop is particularly adept at creating gradations. This application provides effects that make your image look more cinematic or artful, depending on the look you choose. You can create a color correction, too, based on your choice of an object that you select to be the
