Field of the Invention The present invention relates to the use of an anaerobic sulfate reducing process for the removal of sulfate from water and is especially useful in the production of alkaline water or the removal of sulfate from waste waters. 2. The Prior Art Sulfate ion (SO<sub>4</sub><sup>2-</sup>) is present in most waters and is of concern in some, especially acidic waters, as it can lead to corrosion problems and adversely affect the taste and odor of the waters. The conventional method of removing sulfate from water is by reduction with a sulfur compound such as calcium sulfite or calcium sulfate or by using sulfur-containing reducing agents such as sodium or potassium hydrosulfide, thiosulfate, metabisulfite or combinations thereof. Such processes have been disclosed in the prior art as shown by British Pat. No. 1,134,442 which teaches a process for producing alkaline water using a sulfur-containing reducing agent and one or more sulfide reducing bacteria. U.S. Pat. No. 3,069,384 discloses a process for removing sulfate from waste waters wherein the waste water is reacted with a sulfur compound in the presence of microorganisms to convert sulfate to elemental sulfur. U.S. Pat. No. 3,230,006 discloses a process for purifying acid waters which comprises reducing the sulfur compounds in the acid waters to elementary sulfur, separating the elementary sulfur, oxidizing the elementary sulfur to sulfate and removing the sulfate by reacting it with alkali. One of the disadvantages of the prior art processes is that a1d647c40b
