Injection molding is a popular process in many manufacturing industries, including automotive, electronics, medical and more. Because of the high capital investment and level of expertise needed to have an efficient injection molding process in your manufacturing facility, selecting and purchasing the right plastic injection molding machine can be extremely difficult. The design, manufacture, marketing, sale, and operation of plastic injection molding machines requires technical training, specialized knowledge, experience, and education. FREE PICAT Injection Molding Simulation PICAT (Polymer Injection Computer Aided Tool) is a great tool that will help you save money and production time in injection molding training. PICAT is an online simulation platform that will help you learn and train on the injection molding process, much like at the real machine. PICAT provides an easy and comfortable way of training without the pain of building one-off mold or risking a production line. Over 100,000 plastic injection molding machines are sold every year, PICAT helps you learn the process to speed up your hiring process and increase production. TESTIMONIALS The PICAT online simulation software is a cost effective and convenient way of teaching plastic molding related subjects. We have used PICAT to assist in the training of molding machinists and general mill operators. PICAT provides us with a steady flow of trained personnel, as well as, other benefits associated with being able to simulate the injection molding process in PICAT. The staff is highly educated on molding processes, they have always had to collaborate and work as a team as if the PICAT simulation were a real injection molding machine. We have been able to minimize the risk of staff receiving bad training by using PICAT online simulation software. picat injection molding You can use PICAT for machine design and manufacturing. It is equally simple to learn and operate, allowing you to learn and train with ease. PICAT enables simulation of a wide variety of tooling including jigs, molds, machines, dies, and tools. TESTIMONIALS TESTIMONIALS We are a F&D company and many of our employees who have been taught to operate the injection molding machine. PICAT is a great training tool. It allows us to teach the operator all at one time and no other tools needed. TESTIMONIALS "PICAT provides an easy and comfortable way
