**5 Quick Tips for Photoshop Elements**

1. Import an image into Photoshop Elements Open Photoshop Elements and go to File > Open. Select the image you wish to edit and click Open.
2. Edit the Image Once the image is open in Photoshop Elements, you can use the tools and controls of Photoshop Elements to fix any problems. You can use the Photoshop Elements tools to adjust the exposure, lighten the shadow, lighten the highlights, sharpen the image, apply filters, effects and a whole lot more. The Controls panel, shown below, offers a quick way to adjust the image, and you can use these controls to rotate and resize the image and to zoom in and out of the image. You can also use the adjustment layers to modify different areas of the image. The adjustment layers are like magic filters. You can add or remove layers, adjust layer settings like Opacity, and, on top of that, you can add or delete channels. The Layers panel, shown below, will be automatically opened when you select the menu icon at the top of the image, as shown below. Depending on the size of the image, you may have to resize the image to make it fit within the work area. You can use the Scale tool or Grab. Press the ALT key and hold down the left mouse button until the resize cursor is over the image. While holding the CTRL key press the left mouse button and drag to resize.
4. Save and close the image Save the image in the desired format. Photoshop Elements offers a lot of different image formats to choose from.
5. Enhance your image in Photoshop Elements Open Photoshop Elements, select the Image > Adjustment Layers menu and select the "Adjustment" tab. To edit a single adjustment, click the "+ 05a79cecff

### What's New in the?

Q: Non-Uniform User Interface design for Android App. Is it possible? I'm working on developing a social networking android app which when it's first launched, has a blue light image on the screen with a title. It shows up once in a while and then it shows user profile images on the screen which are already setup in my application. Now i'm planning to optimize my current design to have a beautiful and simple UI that will gives users a feel of android apps on iphone. So what is the user experience when he/she starts using my app. They start the app and after that they see the default design with the blue light color and the title. Now what is the right way to make such kind of design. Any ideas will be appreciated. A: Yes, this is possible, it's called the "Head First Look" or something like that. It's been a standard in digital designers for a long time, and it's a lot easier in terms of interface design to make the first user experience go smoother than the next because you can gauge how they are going to react. I'm sure you can find an example of it somewhere. Just make sure to do it early on so that you get someone to check if it's good enough.

A retrospective database review. Chart review of joint arthroscopy was performed on 2819 patients who underwent shoulder arthroscopy from 1/2011-12/2011. Significant complications were noted and the total number of cases for each procedure were recorded and analyzed. The first 20 cases on each shoulder were reviewed, and the number of exposures for each procedure were recorded and compared with the second 20 cases. A total of 358 shoulder arthroscopies were performed. The most common operation was diagnostic arthroscopy, which was performed in 35% of patients. The most common complication was neuropraxia (3%). There were significantly fewer arthroscopic exposures ( $p=0.0001$ ) performed by the second 20 cases, with a mean of 21 exposures compared to the first 20 (mean of 69). This difference is statistically
