Every few days, we would get a new text from a client or colleague on the mission field for our company. They'd report on the vision God has given them, or they would tell us about a training opportunity that had come up. Stunned was the emotion that came to me as I read each text. Because I'd been in this business for the past 20 years (scheduling classes... teaching people about the teaching of Jesus... writing books), I'd become a pretty good consultant. In fact, I knew what was probably coming down the next line, but I still gasped when I

I would like to thank Medior C-Store for their nice website template called â€śC-Storeâ€ť to create a well-organized and modern online store. I have used it for my ecommerce project and its look is amazing. Thank you once again. â€śC-Storeâ€ť is an excellent website template dedicated to creating an online store â€" like an Apple Store, Best Buy, eBay, Amazon or Teslaâ€™s. It has a clean and modern look and feel, which makes it suitable for products ranging from electronics, to apparel, gadgets, books, apps and accessories, and even services. Also, it supports WooCommerce and includes many features, such as a powerful drop-down menu, a nice slider, and a design with 3 levels, vertical and horizontal scrolling, plus 4 columns per page. The admin area is easy to navigate, with many different sections, which can help you in managing your products and customers. The full package comes with many features, like unlimited colors, font types, image formats, image sizes, animated banners, custom fonts and many more. I would recommend you to try it out. MathEditor is an equation editor for Windows designed for use by students and teachers of math, science, physics, and engineering.MathEditor is based on the mathematics characters commonly used in the US. It requires no special fonts or additional software to be used. It is fully configurable and supports 2D and 3D viewing in standard and text modes. MathEditor supports the most common mathematical equations (sines, cosines, tangents, exponents, logarithms, etc.) in a variety of configurations including single and multiple lines. It also supports scientific notation, delimited equations, and matrix math. MathEditor includes a simple method to creating mathematical equations for presentations, essays, theses, and any other types of projects, dedicated to teachers and students alike. MathEditor offers a simple method to creating mathematical equations for presentations, essays, theses, and any other types of projects, dedicated to teachers and students alike. Setting up the application takes little time and does not require special input from the user. Its interface is represented by a regular window with a clean aspect, where you can just click symbols to insert them into the body. These include brackets, Greek symbols, square roots, integrals, matrices, relational operators, and so on. The font type can be toggled between STIX, Arial and Segoe UI. Plus, you can switch from text to math mode and vice versa. It is possible to zoom in and out, cut, copy, paste, delete and select all text, insert symbols from a table of contents broken down into categories (e.g. mathematical operators and number forms, basic Latin, shapes), add Unicode values, switch to full screen mode, as well as show nesting. The project can be saved to file for further editing, as well as exported to PNG, JPG, GIF, BMP, TIFF or WMP format. MathEditor has a good response time and works smoothly, without causing the operating system to hang, crash or show error messages. We have not come across any issues in our tests. The tool uses low CPU and RAM, so it's not a concern to the overall performance of the computer. All in all, MathEditor simplifies the user's job when it comes to creating mathematical equations, compared to complex programming tools like LaTeX. It should please all types of users, thanks to its intuitive layout and overall simplicity. The latest version of MathEditor is now available! Check it out now
