. Is there any significant reason for this behavior?.Luiz Carlos Velloso Galopeiro 09/28/10 14:38:12. ROMS>GAMES>GAMEZ >AUTOMATICS>TOCKJ>TOCKK>TOCKD>T OCK9>TOCKP>TOCK40.Ink is cheap because of the magic of the printing press. But will the magic disappear? No! Despite all the talk about all kinds of electronic ink--perhaps none of which will be any good--I think that the future of printed materials will remain essentially the same.

Of course we will have a revolution in printing: we will have screens, lasers, and other sorts of ink that can be burned off. But for the foreseeable future, ink will be ink, and paper will still be the most flexible and most inexpensive way to print. The reasons for this are many. First, to print anything digitally, you need a computer. Second, for inkjet printing, you need to replace the ink. Eventually, we will discover a permanent, non-toxic ink. But we are not there yet. Third, ink is cheap. Fourth, paper is cheap and plentiful. We may decide to stop wasting so much of it. This combination of cheap ink and cheap paper has been around for a long time. Beginning in the second millennium B.C., Chinese and Egyptians wrote on papyrus and used cranes to feed the paper through the writing tools. In 1601, the year Gutenberg published the Bible, there were already 7,000 printing presses in Germany. Before the invention of the printing press, books

were expensive. High-quality paper and lavish decorations made the books worth the investment. Even then, books still cost around 20 percent of a monk's income.

When the press was invented in 1450--around the same time that the university was invented--and book production became possible, the price of books plunged. The price of books might be higher than a monk's income, but it was small beer. Today, if you want to read the Bible, you can buy a new-in-the-box Kindle Edition for a paltry \$10. Now that you understand why, you may wonder about all the hype I am hearing about digital ink.

Where do we get it? We get it from the chemical industry, which prints on screens.

The ink
