A: I suggest the following tools to open your file: WinHex PSTools 7-Zip Since you are running Windows 7, WinHex can be opened by typing shellcode.exe into the Start/Run... tool. The Microsoft tool for opening binary file formats is named SHELLCODE.EXE. To open it, start the Windows Explorer, open the folder C:\Windows\System32\shellcode.exe, and right-click on it and select Open. Both shellcode.exe and SHELLCODE.EXE execute the same command line in cmd.exe: x64 shellcode.exe /c calc.exe The number of bytes read (the last command line argument) is the number of bytes in the file. The size of the file can be determined by using the calculator at Also you can use the BCD editor of WinHex. It can handle a much larger file size than WinHex can handle by itself. I hope I understood correctly. It might be that you meant to ask how to find the file type of the file you want to open. It's easy: Use the file properties of Windows Explorer, select the "Details" tab, click "Open" in the "File Type" field. You will see a small file icon for an image, a txt.doc or TXT file, an EXE, and so on. If you're still unsure how to search for a specific file type in files on your hard drive, use the WinHex Search tool. It is helpful when you don't know where the file is. You can type into the text field "filetype:\*.ext" or "\*.ext". Use Ctrl-F to search in WinHex or the file list in SHELLCODE.EXE.

If you don't know the file name or just want to search for the file type of a file, use the Browse button. This will show the file content. If you're familiar with the file types of files on your hard drive you can use the file filters. However, the file filters only work for certain file types, mostly with sound files. This is normal, because the file filters only work on the first 25 bytes of a file. A: This tool will help 6d1f23a050
