In this study the authors analyzed 319 epithelial cell tumors treated at the University of Kentucky to determine the importance of 3 histologic features commonly used for predicting prognosis in squamous cell carcinoma: infiltrative growth, keratinization, and nucleolar size. Using all 318 available records for patients with epidermoid carcinoma (n = 95), the authors generated a prognostic index for each of 3 aspects of tumor growth and verified its prognostic significance in various histologic subsites. The authors analyzed all cases of epidermoid squamous cell carcinoma (SCC) (n = 95) in the oral cavity, oropharynx, and larynx. A tumor scoring system was developed based on 2 questions, 1 about tumor size and 1 about degree of keratinization. A prognostic index was generated for each of 3 criteria by multiplying the tumor size score with the degree of keratinization score. The value of the prognostic index was then determined by using it to stratify the prognosis of the patients into 3 categories (good, intermediate, or poor prognosis). The prognostic significance of the 3 histologic features was then compared using multivariate analysis. This study revealed that although both tumor size and keratinization are predictive of prognosis, degree of keratinization is more strongly predictive of prognosis than is tumor size. Compared with all patients with SCC, the prognosis was better for both disease-specific and disease-free survival for patients with tumors that were large (> or =6 cm) and had no signs of keratinization, whereas patients with both small tumors and keratinized tumors had significantly worse survival compared with the SCC cohort. This study has provided evidence that morphologic criteria are more useful than size criteria for predicting prognosis for patients with SCC. The degree of keratinization was more strongly predictive of survival than was tumor size.You are here The Issues Congress Must Address Now Congress's recess means that we, as taxpayers and parents, are unable to address our critical needs.
