Lightroom is one of the best-reminder applications included in a photo workflow that can help get a photographer back on track with their project. Lightroom has become one of, if not the best platform for categorizing, editing and syncing your images on the web and in the cloud. Lightroom is a solid platform for cataloging your images, or organizing your images to share with people of varying skill levels and needs. This is why I buy the Apple iPad to use as my go-to tablet device, as I like how it's easy to organize my images, along with the apps that I can purchase to further streamline my workflow. I love Lightroom, and I can't say it enough. Thanks Scott for another great review!

Lightroom is the best digital darkroom out there. With so many different kinds of control, there's a perfect program for every photographer. And right now it's not just about being able to do some of the specific tasks of a print darkroom, but about having the most comprehensive, powerful editing and managing options available.

It's a great product that has more room to expand than any other software on the market. The one thing that always surprises me though is Lightroom's lack of several features found in Photoshop, such as some introductory cost and administrative options that quickly teach you how to use the program. A program like Lightroom and the iPad app are not the same as Photoshop, but they're still a very valuable addition to any photographer's workflow. All in all, it's not a review of Lightroom, but a look at the current state of the art in photography — and how a new generation of photographers and creative visionaries are bringing that work right into the digital workspace of everyday people.
