KEYMACRO is a unique anti-spyware utility designed to assist with identifying and removing rootkits from your computer. It was developed by a team of highly qualified anti-spyware professionals to help users identify and remove key rootkits that can potentially jeopardize your system security and steal your information. This unique anti-spyware utility includes rootkit scanner, registry cleaner, unpacker and file browser. The rootkit scanner located in this program scans the computer for all the installed rootkit infected files, if any, and all the malicious files in the computer registry. The created log file includes all the scanned files, which can be sent to the file explorer for quick manual scan. After scanning, the cleaned registry keys are presented to the user with a complete list of all the malicious files detected during the scan. To ease the user experience, the program displays an alert window as soon as it detects new files. After you are done cleaning, the program will start the file explorer to give you a quick view on the new registry keys. The file explorer in this tool can be used to delete any registry key that contains the malware. While scanning, the program will also show the user all the duplicate files found on your computer.
