This is good timing, just for some housekeeping: LR 5.3 has been available more than two months now. Yes, there were a lot of minor changes during that time, but nothing significant. I appreciate this posting by Adobe and the comments, too. But, it seems to me that the major change between Lr5.2 and the new Lr5.3 (and given what was reported at <http://blogs.adobe.com/creativecloud/>.) is the new object selection tool, which is excellent. I didn't have one for quite some time, and I have missed it a lot. I didn't see a way to make it so when I had a reference selection (face, etc.), it would make the tool work like I want. If I see something on the screen that I want to remember the coordinates for, and I want those coordinates to be saved in a file for later, and I want it to work the way I want it to. And I want to be able to choose whether with a face (which is nice for me), or with any other existing selection. I don't want to exclude any of the other objects in the image and have to start over. This is not to say it won't have its own issues, but in LR and in other programs it will drag in lots of other stuff, and what if it doesn't work the way I want. And if it does, great, I'll be able to go back to having more control over my selections. This, in one sense, was the old days in LR.

In the near future, you'll be able to use Content-Aware Move in Filmstrip view, so pop into Photoshop to see it in all its glory. There's also a new feature called Warp Stabilization, which replaces the Levels tool for adjusting colour in sections of your image for greater control. There's also a number of new filters added, including two-layer modes. Photoshop is always changing to meet the needs of creative professionals, and the new features in 2021 will further evolve Photoshop for a more meaningful, productive, creative experience. The new features include a new block editing tool to make it easier to create 3D models. Designers can also create a new block mode, which will allow them to save shared designs at different stages, and also create and save colour palettes rather than just use the 'save a palette' feature. New in 2020 is the new Wayback Machine, which will help you locate images from the past that match the subject of an image you intend to edit. The new feature will look through your images and show specific examples that match others that are already in your archive. Also announced at MAX, the free version of Photoshop Mobile revolutionizes the way people work with photos and graphics. Photoshop Mobile for Android and iPhone and iPad make managing images even easier than ever. This feature also enables users to overlay text on top of images while maintaining layers, import photos from photos albums, and share images with friends and colleagues.
