The palette is improved along with the many new tools offered, but Face Editing has not risen to the same level yet as Elements' and Lightroom's tools for enterprise-level editing. Elements does not do as well in this area particularly with enterprise customers with large and complex image repositories. It has no tools that are suited for much user interaction while applying complex selections to an image. Photoshop Elements still has the best selection tools over the other two third-party (Mac and Windows) competitors, and best tools generally get the job done quickly and

accurately. Right now, Faces has the best selection tools but Elements doesn't do as well with larger selections. It's a matter of time for Adobe to produce something better in this area. Adobe points out its "truest" image file (TIFF) support in Elements versus the other three third-party alternatives. Photoshop has the deepest selection tool set with semi-destructive options, followed by Lightroom and Silver Efex Pro. However, once you have made a selection, Elements, Lightroom and Silver Efex Pro all have the same practically unlimited undo option. So, there are other options available from different editing platforms to easily rework any "selections" and undo or step through processing if needed. Icons, such as the new Live Filters Edit, have their place but, for me, it's such a small place in Elements 2021 that I don't much use them. There is no real way to adjust certain Photoshop-like filters, such as the new "tile" filters, with more precision than, say, using filters in Photoshop. Elements also has a nice feature in its Ability toolkit called "Select by Hand Close Up" to manually select an image area with a zoom box.

Changes to the Photoshop text layer simply means that any special characters included in an image's text (ie "spotlights") will be included in the print-out of the image. This can be a helpful feature if you want to turn a person's name into electricity, for example, and you don't want the special characters to be seen in the printout. Remove the text layer to avoid such an issue. Disclosure: Working as a freelance photographer, this web page is running on my MacBook Air's Creative Cloud subscription.
