Checking out the left side of the screen, you'll see the Import panel. There are some pretty tough names for a new feature in this list of workflow-boosters. The Imposter filter, Scene Blender and Lens Correction are far from being the real world solutions. These are tools that are supposed to simplify the work of a photographer. First off, you'll need to be aware that Imposter can't do anything more than identify your mistakes in the image, and you'll find out which mistakes are the ones that are likely to happen in real-life situations when you turn the tool on. In other words, it's not that great of a solution when you need to actually clean up an image. Seeing the right side of the screen, you'll see their new Find panel, which has Search by Color, Lighten, Brighten, Darken, Colorize and Sharpen filters, plus a bunch of other regular filter options available. In addition, you can check out the unsharp mask filter, and also the ability to apply a preset blur via the Lighten, Darken and Colorize filters. There's also an option for a new Curves filter. I don't really see a much of a difference with Lightroom 5 in the Exposure tab that has its exposure value going up to 46.0 EV, but the rest of it is good. Adobe's Photo Swipe app for iOS is an interesting new way of viewing images on mobile devices. This swipe-based app lets you view and share images on your mobile device and is similar to the iOS Photo+ feature. However, Photo Swipe is a separate app, and as such, it's not included in the Creative Cloud. If you get Flickr and Flickr Pro, you get Photo Swipe. Photo Swipe uses the SIRI search engine to scan through popular photos on Flickr and display them in rows for browsing. The new photo sharing service is called World Photo as of the iOS 11 release. Any content shared to the service is free. It's a cool way to browse your photos.

In a word, Lightroom is fantastic and overall the best editing program a photographer can use. You can compare it with Photoshop by looking at a couple of key areas. After conversion, you can then organize them using various tools and lightroom has a superior UI. Once you get in the weeds of customizing Lightroom for your workload, you'll find it can do anything you throw at it but it won't replace Photoshop for most photographers. It's a fantastic tool and we suggest it as the editing program of choice. e3d0a04c9c
